

# Homeowners' fixings guide

Your new homes external walls (inner masonry leaf of the cavity wall and integral garage wall) have been constructed using the **Porotherm Clay Block Walling System** manufactured by **Wienerberger**, the worlds largest clay building products manufacturer.

Porotherm is a structural clay block walling system and, as with any such walls, care must be taken should you wish to modify your property. Advice should be sought from a Structural Engineer should you wish to modify or remove any areas, form new openings etc.

For all details of the Porotherm system please visit [www.wienerberger.co.uk](http://www.wienerberger.co.uk)

## How do I fix into Porotherm blocks?

SPIT Fixings are recommended by Wienerberger to be used for fixing into **Porotherm** blocks. The following are examples of Light, Medium and Heavy weight fixings available for a variety of uses.
